Passionate About Applying Machine Learning Technologies to Build Innovative Solutions

EXPERIENCE

Student – Bengaluru, India

- Gave presentations on current topics relevant to the curriculum.
- Demonstrated excellent organizational skills while managing multiple tasks simultaneously.
- Participated in a variety of campus events, such as career fairs and workshops.
- Completed Machine Learning with AI course on Internshala.
- Completed Introduction to Applied Machine Learning course in Coursera.

Machine Learning Intern – Unified Mentor (*Jan 2026 – Mar 2026)*

- Developed machine learning models for real-world applications including classification and prediction systems
- Built projects such as ZooVision AI, Fraud Detection and Vehicle Price Prediction.
- Performed data preprocessing, feature engineering, and model evaluation.
- Improved model performance using techniques like SMOTE and hyperparameter tuning.
- Worked with Python libraries such as Pandas, NumPy, and Scikit-learn.
- Documented and presented project outcomes effectively.

Android App Development using Gen AI (Intern) – MindMatrix (*Feb 2026 – May 2026*)

- Learnt Kotlin programming fundamentals, Generative AI basics, and AI agent concepts.
- Built Android applications and completed practical development tasks.
- The internship helped me gain practical knowledge in Android app development, Kotlin programming, and Generative AI.

EDUCATION

Sri Venkateshwara College of Engineering, Bengaluru **2022-2026**
Bachelor of Engineering, Computer Science Engineering: 7.67 CGPA

Dolphin's PU College, Sidlaghatta, Chikkabalapura **2020-2022**
PCMB: 89.3%

PROJECTS

- **Crop Recommendation System (Synthetic Data Testing)**
  Built a machine learning model for precision agriculture, applying synthetic data-driven validation for robustness.
- **ZooVision AI (Computer Vision)**
  Built an AI-based animal recognition system using image classification
  Applied deep learning techniques for accurate prediction
  Improved model accuracy through data augmentation and optimization.
- **Financial Fraud Detection**
  Developed a fraud detection system using Random Forest on imbalanced datasets
  Applied SMOTE to handle class imbalance
  Engineered temporal features to detect multi-day fraud patterns.
- **Vehicle Price Prediction System**
  Built a regression model to predict vehicle prices based on multiple features
  Used feature selection and model tuning to improve prediction accuracy.

TECHNICAL SKILLS

- **Programming Languages:** Python, C, Java, Kotlin, HTML, CSS, TypeScript, SQL.
- **Technologies & Frameworks:** Next.js, Node.js, Express, MySQL, MongoDB, Fast APIs.
- **Tools & Libraries:** Android Studio, Google-AI Studio, Git, NumPy, Pandas, TensorFlow, Scikit-learn, Framer Motion, React.
- **Other Skills:** Communication, Problem Solving, Data Analysis, Critical Thinking, Project Management.

ADDITIONAL INFORMATION

- **Hackathons/Competitions:** Active participant in Hackathons.
- **Certifications:**
  Machine Learning Course – **Internshala**
  IR 4.0 Foundation Course – **TECHSaksham**
  Machine Learning Internship – **Unified Mentor**
- **Languages:** Kannada – Native, English – Advanced, Hindi – Intermediate, Telugu – Elementary.
- **Sports:** Kabaddi and Volleyball.
