SUMMARY

Motivated Software Engineering student with hands-on experience in Machine Learning, Computer Vision, and Android App Development, skilled in building real-world AI and full-stack applications. Experienced in data preprocessing, feature engineering, classification, prediction systems, and responsive mobile application development.

TECHNICAL SKILLS

Languages & Technologies: Python, HTML, CSS, Javascript, React.js, MySQL, MongoDB, Fast APIs, Kotlin.

Tools & Libraries: Google-AI Studio, Android Studio, VS Code, Google Cloud, Git, NumPy, TensorFlow, Scikit-learn.

Other Skills: Communication, Problem Solving, Data Analysis, Critical Thinking, Project Management.

PROFESSIONAL EXPERIENCE

Android App Development using Gen AI (Intern) - MindMatrix

Feb 2026 – May 2026

- Learned **Kotlin**, Jetpack Compose, Generative AI fundamentals, and AI agent concepts.
- Built Android applications using modern UI development practices and reusable composable components.
- Developed **Kutira-Kushala**, a full-stack Android application that digitizes cottage industries such as basket weaving, papad making, and agarbatti production into searchable micro-factory profiles for bulk buyers.
- Gained hands-on experience in **Android development**, API integration, and AI-assisted application design.

Machine Learning Intern - Unified Mentor

Jan 2026 – Mar 2026

- Developed and evaluated machine learning models for real-world **classification and prediction** applications.
- Built projects including **ZooVisionAI**, **GuardianAI Fraud Detection**, and **AutoPriceML Vehicle Price Prediction**.
- Performed data preprocessing, feature engineering, model training, and model evaluation using Python.
- Worked with libraries and frameworks including Pandas, NumPy, Scikit-learn, TensorFlow, and OpenCV.
- Documented project outcomes and presented technical findings effectively.

PROJECTS

- **Kutira-Kushala App (Self-Employment)** | [GitHub](#)
Built Kutira-Kushala, a full-stack Android app (Kotlin + Jetpack Compose) that empowers cottage industry entrepreneurs.
- **ZooVisionAI-Animal Image Classification** | [GitHub](#)
Built a Computer Vision pipeline using TensorFlow and OpenCV to preprocess, augment, and classify images of various animal species.
- **GuardianAI-Financial Fraud Detection** | [GitHub](#)
Built a Machine Learning pipeline using Random Forest to classify fraudulent transactions within a highly imbalanced dataset of 1.75 million records.
- **Portfolio** | [GitHub](#)
Developed a responsive professional portfolio using Next.js, Framer Motion, and Lenis.

EDUCATION

Sri Venkateshwara College of Engineering, Bengaluru

2022-2026

Bachelor of Engineering, Computer Science Engineering: 7.75 CGPA

ADDITIONAL INFORMATION

- Strong understanding of software development lifecycle and collaborative development practices.
- **Certifications:**
IR 4.0 Foundation Course - **TECHSaksham**
Machine Learning Course - **Internshala**
Machine Learning Internship - **Unified Mentor**
Android App Development Using Gen AI Internship - **MindMatrix**
- **Languages:** Kannada - Native, English - Advanced, Hindi - Elementary, Telugu - Elementary.
